

FSX crashes running UIAutomationCore.dll

uiautomationcore.dll eigenschappen

Both files with different size...? 549Kb in C:\Windows\SysWOW64 and 734 Kb in C:\Windows\System32

Reading in different fora I came to the conclusion that this file UIAutomationCore.dll is causing FSX to crash and could be simply removed.

How to remove UIAutomationCore.dll from windows 7? These multiple files are stored in C:\Windows\system32\ and C:\Windows\Syswow64\

Simply delete these files; make a spare copy in case of...

HERE IS THE FIX: You may have to take ownership of the files if windows stops you from deleting the file.

Open CMD prompt and right click to run as administrator and then type in exactly as below substituting **your windows login username** where it says username:

```
takeown /f C:\Windows\System32\uiautomationcore.dll
```

```
cacls C:\Windows\System32\uiautomationcore.dll /G username:F takeown /f C:\Windows\Syswow64\uiautomationcore.dll
```

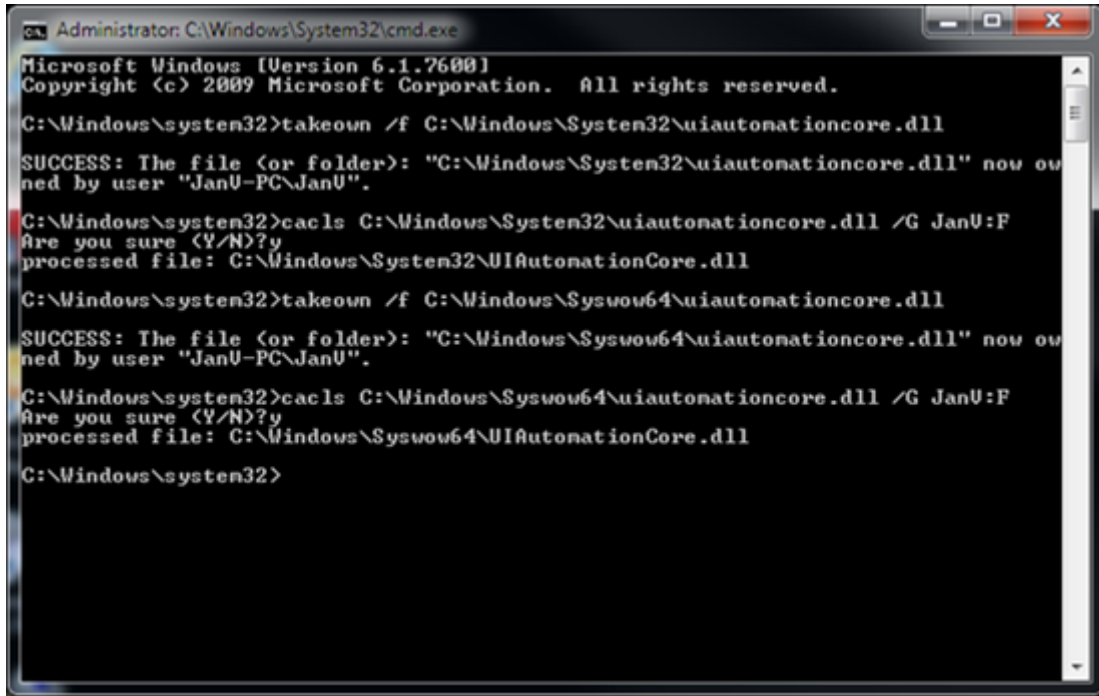

```
cacls C:\Windows\Syswow64\uiautomationcore.dll /G username:F
```

Now you can just navigate to your syswow64 and system32 folders in windows explorer and after backing up the UIautomationcore.dll files just delete them from your computer.

(Remember to delete the UIautomationcore.dll file in your FSX folder also if you installed it as an earlier the fix. If you need this file anyway, please have a look in my SkyDrive)

This is what you get in the command box:

take care that you use your own username!

```
Administrator: C:\Windows\System32\cmd.exe
Microsoft Windows [Version 6.1.7600]
