

FlightSim Commander 9.0

(Article no.: 11745)

Screenshots[>> Screenshots](#)**Product description**

FlightSim Commander is a professional flight planner, GPS, Moving Map and navigation tool for Flight Simulator 2004 and Flight Simulator X. Plan a flight professionally using entire routes or route segments. Insert North Atlantic Tracks, PACOTs and SID's and STAR's. Save or convert your flight plans in various formats such as FSX, PMDG, Radar Contact, Sqawk Box, IVAO or LevelD.

Use the Moving Map function to follow your aircraft's or the AI aircraft movements.

The most important new function of Version 9 is the possible connection to Google Earth. Now you can see your actual position in real time on Google Earth or view your recorded flights using Google Earth.

Further new features are:

- A more intuitive use of the mouse
- A new flight planning window, undockable and sizable
- Option to include transitions
- Fly Over function when using the Autopilot
- Display of Approach, Missed Approach and Holding on the map
- Separate waypoint window, undockable
- New approach window in graphic display and text
- etc. ...

A Must Have for all online pilots is the display of the airspace structure of the online networks of IVAO and VATSIM with the occupied controller stations and active aircraft. Also a new feature: set up a friends database in FSC.

FlightSim Commander X can be used on a separate PC via a network link. Using the payware "WideFS" which is not included in this package.

UPDATE-SERVICE:

Use our **CD-Upgrade Service** and save a lot of money! The Full-Update for owners of previous FlightSim Commander **boxed versions** for only 24.99 € instead of 39.99 € is available at the purchase when sending back the Original-CD. Owners of the **download version** can enter the serial key of their previous version during the order process.
